

Do we have any additional documents, workflows, screenshots, sample data, business rules, healthcare examples or phase-specific inputs that should be added before implementing this phase?

If no additional input is provided, proceed using the AHIP assumptions and clearly list those assumptions.

7. Repomix Instruction

1. Generate latest Repomix from the current AHIP repository.
2. Attach or paste it with the phase prompt.
3. Ask AI to first analyze current code state.
4. Do not ask AI to blindly rewrite the project.
5. Apply changes in small validated steps.

8. AI Prompt Framework

Act as an Enterprise Healthcare Product Architect, Agentic AI Architect and Real Rails Internship Mentor.
We are building AHIP – AI Healthcare Intelligence Platform.
This is Phase 2: First Agent Development.

This is not a chatbot.
This is not a generic RAG system.
This is a healthcare workflow intelligence platform.

Use:

- AHIP Product Bible
- AHIP Healthcare Domain Guide
- AHIP Agentic AI Guide
- AHIP Architecture Guide
- AHIP Execution Protocol
- Current Phase HTML
- Latest Repomix

First provide:

1. What already exists
2. What this phase must add
3. Healthcare concepts involved
4. Agentic AI concepts involved
5. Files/modules likely affected
6. Step-by-step implementation plan
7. Validation checklist
8. Risks and assumptions

Do not start coding until the plan is clear.

9. Deliverables

- Patient Journey Agent
- Claims Review Agent
- Provider Contract Agent
- Agent output schema
- Agent execution table/log
- Sample agent test cases

10. Validation Checklist

- Each agent accepts input context
- Each agent produces structured output
- Agent outputs include evidence
- Execution history is stored
- No chatbot interface is used

11. GitHub Completion Template

Phase 2 – First Agent Development – Completed 

Completed:

- [Add completed item]
- [Add completed item]
- [Add completed item]

Healthcare Concepts Covered:

- [Add healthcare concepts]

Agentic AI Concepts Covered:

- [Add AI concepts]

Validation:

- [Add validation performed]
- [Add screenshots/logs if applicable]

AI Usage:

- Used AI for planning / debugging / documentation
- Outputs manually reviewed

Known Limitations:

- [Add limitation]

Next Phase Readiness:

- Ready / Not Ready
- Notes:

12. Handover Checklist

- Code or research output committed.
- README or phase note updated.
- Validation evidence captured.
- Known limitations listed.
- Next phase dependencies documented.
- GitHub completion post added.

13. Do Not

- Do not convert AHIP into a chatbot.
- Do not build only document Q&A.
- Do not invent unsupported healthcare rules.
- Do not make medical diagnosis or treatment recommendations.
- Do not skip auditability.

Prepared for Real Rails Agentic AI Internship Program – AHIP Phase Execution Pack.
