Phase 0 – Healthcare & Agentic AI Research

AHIP – AI Healthcare Intelligence Platform

Real Rails Agentic AI Internship Project | Phase Execution Pack

Objective: Build domain understanding before coding AHIP.

1. What AHIP Is

AHIP is an Agentic Healthcare Operations Intelligence Platform. It uses specialized agents, agent memory, context engineering, multi-agent collaboration and decision intelligence to identify healthcare workflow gaps and recommend operational actions.

AHIP is not a chatbot, not a generic RAG app and not a medical diagnosis tool.

2. What Was Built Previously

This is the starting phase. No code foundation exists yet. The intern must first understand AHIP, healthcare payer workflows and Agentic AI.

3. What To Learn In This Phase

Healthcare Learning

Healthcare payer ecosystem, member/patient, provider, claim, benefit plan, provider contract, operational provision, care task, workflow event, compliance, escalation.

Agentic AI Learning

Agentic AI basics, difference between chatbot/RAG/agentic workflow system, agent goals, memory, context engineering, multi-agent collaboration.

4. What We Build In This Phase

Research report, domain glossary, healthcare workflow map, agent opportunity map, MVP assumptions.

5. Required Feeder Documents

- AHIP Product Bible
- AHIP Healthcare Domain Guide
- AHIP Agentic AI Guide
- AHIP Architecture Guide
- AHIP Execution Protocol
- Current Phase HTML
- Latest Repomix generated from the current repository
- Any phase-specific healthcare notes, sample data, screenshots or business rules

6. Mandatory Additional Input Question

Before starting implementation, the intern must ask:

Do we have any additional documents, workflows, screenshots, sample data, business rules, healthcare examples or phase-specific inputs that should be added before implementing this phase?

If no additional input is provided, proceed using the AHIP assumptions and clearly list those assumptions.

7. Repomix Instruction

1. Generate latest Repomix from the current AHIP repository.
2. Attach or paste it with the phase prompt.
3. Ask AI to first analyze current code state.
4. Do not ask AI to blindly rewrite the project.
5. Apply changes in small validated steps.

8. AI Prompt Framework

Act as an Enterprise Healthcare Product Architect, Agentic AI Architect and Real Rails Internship Mentor.
We are building AHIP – AI Healthcare Intelligence Platform.
This is Phase 0: Healthcare & Agentic AI Research.

This is not a chatbot.
This is not a generic RAG system.
This is a healthcare workflow intelligence platform.

Use:

- AHIP Product Bible
- AHIP Healthcare Domain Guide
- AHIP Agentic AI Guide
- AHIP Architecture Guide
- AHIP Execution Protocol
- Current Phase HTML
- Latest Repomix

First provide:

1. What already exists
2. What this phase must add
3. Healthcare concepts involved
4. Agentic AI concepts involved
5. Files/modules likely affected
6. Step-by-step implementation plan
7. Validation checklist
8. Risks and assumptions

Do not start coding until the plan is clear.

9. Deliverables

- AHIP Phase 0 Research Report
- Healthcare Payer Workflow Map
- Domain Glossary
- Agent Opportunity List
- Sample MVP Scenarios
- Risks and Boundaries Note

10. Validation Checklist

- Can explain why AHIP is not a chatbot
- Can explain payer workflow basics
- Can explain at least 5 AHIP agents
- Can identify MVP boundaries
- Can list assumptions clearly

11. GitHub Completion Template

Phase 0 – Healthcare & Agentic AI Research – Completed 

Completed:

- [Add completed item]
- [Add completed item]
- [Add completed item]

Healthcare Concepts Covered:

- [Add healthcare concepts]

Agentic AI Concepts Covered:

- [Add AI concepts]

Validation:

- [Add validation performed]
- [Add screenshots/logs if applicable]

AI Usage:

- Used AI for planning / debugging / documentation
- Outputs manually reviewed

Known Limitations:

- [Add limitation]

Next Phase Readiness:

- Ready / Not Ready
- Notes:

12. Handover Checklist

- Code or research output committed.
- README or phase note updated.
- Validation evidence captured.
- Known limitations listed.
- Next phase dependencies documented.
- GitHub completion post added.

13. Do Not

- Do not convert AHIP into a chatbot.
- Do not build only document Q&A.
- Do not invent unsupported healthcare rules.
- Do not make medical diagnosis or treatment recommendations.
- Do not skip auditability.

Prepared for Real Rails Agentic AI Internship Program – AHIP Phase Execution Pack.
