Phase 7 – Healthcare Operations Dashboard

AHIP – AI Healthcare Intelligence Platform

Real Rails Agentic AI Internship Project | Phase Execution Pack

Objective: Build the AHIP product dashboard for operational users.

1. What AHIP Is

AHIP is an Agentic Healthcare Operations Intelligence Platform. It uses specialized agents, agent memory, context engineering, multi-agent collaboration and decision intelligence to identify healthcare workflow gaps and recommend operational actions.

AHIP is not a chatbot, not a generic RAG app and not a medical diagnosis tool.

2. What Was Built Previously

Phase 6 added governance. Now the product must become usable through clear dashboards and case-level views.

3. What To Learn In This Phase

Healthcare Learning

Operational dashboards, claims queue, care gap queue, provider issue queue, compliance alerts and executive metrics.

Agentic AI Learning

Human-centered AI outputs, insight presentation, workflow action UI and explainable recommendation display.

4. What We Build In This Phase

Executive summary, operations dashboard, risk queue, case detail page, agent timeline and filters.

5. Required Feeder Documents

- AHIP Product Bible
- AHIP Healthcare Domain Guide
- AHIP Agentic AI Guide
- AHIP Architecture Guide
- AHIP Execution Protocol
- Current Phase HTML
- Latest Repomix generated from the current repository
- Any phase-specific healthcare notes, sample data, screenshots or business rules

6. Mandatory Additional Input Question

Before starting implementation, the intern must ask:

Do we have any additional documents, workflows, screenshots, sample data, business rules, healthcare examples or phase-specific inputs that should be added before implementing this phase?

If no additional input is provided, proceed using the AHIP assumptions and clearly list those assumptions.

7. Repomix Instruction

1. Generate latest Repomix from the current AHIP repository.
2. Attach or paste it with the phase prompt.
3. Ask AI to first analyze current code state.
4. Do not ask AI to blindly rewrite the project.
5. Apply changes in small validated steps.

8. AI Prompt Framework

Act as an Enterprise Healthcare Product Architect, Agentic AI Architect and Real Rails Internship Mentor.
We are building AHIP – AI Healthcare Intelligence Platform.
This is Phase 7: Healthcare Operations Dashboard.

This is not a chatbot.
This is not a generic RAG system.
This is a healthcare workflow intelligence platform.

Use:

- AHIP Product Bible
- AHIP Healthcare Domain Guide
- AHIP Agentic AI Guide
- AHIP Architecture Guide
- AHIP Execution Protocol
- Current Phase HTML
- Latest Repomix

First provide:

1. What already exists
2. What this phase must add
3. Healthcare concepts involved
4. Agentic AI concepts involved
5. Files/modules likely affected
6. Step-by-step implementation plan
7. Validation checklist
8. Risks and assumptions

Do not start coding until the plan is clear.

9. Deliverables

- Executive dashboard
- Operations dashboard
- Risk queue
- Case detail page
- Agent timeline view
- Filters and status badges

10. Validation Checklist

- User can identify top risks quickly
- Case details show evidence
- Agent timeline is visible
- Dashboard is not just decorative
- Workflow action is clear

11. GitHub Completion Template

Phase 7 – Healthcare Operations Dashboard – Completed 

Completed:

- [Add completed item]
- [Add completed item]
- [Add completed item]

Healthcare Concepts Covered:

- [Add healthcare concepts]

Agentic AI Concepts Covered:

- [Add AI concepts]

Validation:

- [Add validation performed]
- [Add screenshots/logs if applicable]

AI Usage:

- Used AI for planning / debugging / documentation
- Outputs manually reviewed

Known Limitations:

- [Add limitation]

Next Phase Readiness:

- Ready / Not Ready
- Notes:

12. Handover Checklist

- Code or research output committed.
- README or phase note updated.
- Validation evidence captured.
- Known limitations listed.
- Next phase dependencies documented.
- GitHub completion post added.

13. Do Not

- Do not convert AHIP into a chatbot.
- Do not build only document Q&A.
- Do not invent unsupported healthcare rules.
- Do not make medical diagnosis or treatment recommendations.
- Do not skip auditability.

Prepared for Real Rails Agentic AI Internship Program – AHIP Phase Execution Pack.
